The ExteNet Solution

ExteNet has an expansive fiber network in New York City and surrounding areas today. With fiber being the essence of broadband and advanced mobile connectivity, ExteNet ensures high speed, high bandwidth and highly secure connectivity for New York City Hospitals today.

ExteNet is also a proven leader in delivering 4G LTE and 5G mobile connectivity and can enable a fully connected hospital and campus via public and private wireless networks.

New York City Hospitals have the opportunity today to reap the dual benefits of massive amount of bandwidth via ExteNet's fiber, and always-connected devices via ExteNet's 4G and 5G mobile networks. For starters, caregivers and hospital staff need high-bandwidth and high-speed connectivity everywhere in the hospital while patients and visitors need their devices connected in the patient rooms and waiting area.

Additionally, large amount of critical digital data - including EMR - traverses in and out of the hospitals requiring highly secure connectivity and, with telemedicine and remote surgeries on the rise, the need for high speed and high bandwidth connectivity is increasing exponentially.

Addressing Your Connectivity Needs

- Trusted network provider for hospitals & healthcare facilities
- Fiber broadband connectivity for your hospital via our high capacity fiber in NYC
- 4G LTE and 5G mobile connectivity for Big 4 carriers in your hospital
- Remote network monitoring via our 24x7 network operations center (NOC)
